CO2 AVOIDANCE THROUGH GREEN ELECTRICITY

SENATOR GmbH

Bahnhofstr. 76, 64401 Groß-Bieberau

has opted for green electricity from ENTEGA Plus GmbH.

The expected annual volume of 3.368.948 kWh corresponding to the electricity consumption will be generated in Scandinavian hydropower plants and fed into the general supply network.

TÜV Rheinland confirms in an annual proof of conformity of the tariff ENTEGA NATURpur Ökostrom - Basis that the energy purchased comes from the named renewable sources and that your electricity consumption has been assigned to the tariff in the Register of Guarantees of Origin of the Federal Environment Agency.

By purchasing ENTEGA green electricity, SENATOR GmbH avoids an expected 1.270 tons of the climate-damaging gas carbon dioxide (CO₂) annually and thus makes a valuable contribution to climate protection. The calculation was based on electricity disclosure as of November 2022.

The contract period for the purchase of green electricity is from 2024/01/01 to 2024/12/31.

Darmstadt, der 2023/12/01
